## File Based Backup

Not all data is created equal. FusionONE File Based Backup provides an intelligent data analyzer to help determine which data is critical and should be backed up. FusionONE File Based Backup helps simplify desktop-based backup.

- The powerful backup analyzer can identify important critical company data—ensuring files are backed up, no matter where the user saves them.
- Easily distinguish between important data to be backed up and non-essential files
- Intelligent monitoring features ensure backups are operating properly
- Efficiently and reliably backup data for mobile and remote users
- Supports unlimited file revisions allowing the client to recover previous versions of data
- Data is encrypted, compressed, and stored in secure Tier III SSAE 16, PCI & HIPAA audited data centers
- Enables backup and recovery of organizational data on end user desktops

FusionONE File Based Backup is supported by our managed services team and can be rolled into any of our Managed Services Packages.
