

# UNLOCK

## THE FULL POTENTIAL OF IoT IN YOUR ORGANIZATION

The Internet of Things (IoT) is only scratching the surface of the amazing potential it has to help organizations reach their savings, customer experience, efficiency, and safety goals. Unlocking the full potential of IoT requires the right network, security, and IT infrastructure – all of which IntegraONE can help you with.

### Think about the potential

These are just a few examples of the amazing IoT use cases that are being adopted. The only limit is your imagination.

#### SMART BUILDINGS

Imagine a building where all the systems – from blinds to physical security – can talk to each other through the network, sharing data and making the building safer and more efficient.

##### OTHER USE CASES INCLUDE:

- » Intelligent video surveillance
- » Connected lighting and HVAC
- » Security and access control

#### SMART HEALTHCARE

Imagine a hospital or long-term care facility where memory care patients have RFID wrist bands that would alert the nursing staff with their exact location if they wandered out of the unit.

##### OTHER USE CASES INCLUDE

- » Remote patient monitoring
- » Real-time location tracking
- » Smart inventory management

#### SMART EDUCATION

Imagine implementing RFID chips into student IDs so sensors could detect when they are in the classroom. Teachers could automate attendance lists and account for students during an emergency.

##### OTHER USE CASES INCLUDE

- » Campus wayfinding
- » Smart dumpsters
- » Smart campus surveillance

### The Internet of Things is helping organizations just like yours:

Improve safety

Increase productivity

Save money

Improve customer & employee experiences

### It all starts with a strong foundation

IoT solutions like these are not “out of the box” products. They all start with a strong network and security foundation and at IntegraONE, we can help you build that foundation through our consultative approach to IoT.

#### First, we assess and review

We'll begin by assessing your network, server, and security infrastructure to determine their ability to support your ideas and how you would like IoT to make an impact in your organization.

#### Then, we build an upgrade plan

We use the information gathered from these reviews and assessments to build an upgrade plan so you can budget for the necessary upgrades or additional capacity in order to be ready for an IoT implementation.

#### Finally, we design an IoT solution

Once the network and security basics are covered, we will help you explore what is possible for your organization, ultimately designing and implementing an IoT solution whenever you are ready.

### Look to IntegraONE as your IoT expert

We can help you transform your ideas into IoT solutions that contribute real value to your organization.

We have a dedicated IoT practice with various subject matter experts on staff

Deep healthcare and education expertise

Network, server, and security infrastructure are our core business

## LET'S DISCUSS YOUR IDEAS AND CHALLENGES

Reach out today to schedule an initial meeting or assessment, or visit our IoT page to learn more.
